Grove Press. Paperback. Book Condition: New. Paperback. 336 pages. Dimensions: 8.2in. x 5.4in. x 1.0in. Credited with discovering more species than Darwin, praised for his ability to take complex ideas and seemingly effortlessly make them accessible (Sydney Morning Herald), Tim Flannery is one of the worlds most influential scientists, head of Australias Climate Change Commission, and a best-selling author. In his newest book, Here on Earth an immediate best seller in Australia he has written a captivating and dramatic narrative about the origins of life and the history of our planet. Beginning at the moment of creation with the Big Bang, Here on Earth explores the evolution of Earth from a galactic cloud of dust and gas to a planet with a metallic core and early signs of life within a billion years of being created. In a compelling narrative, Flannery describes the formation of the Earths crust and atmosphere, as well as the transformation of the planets oceans from toxic brews of metals (such as iron, copper, and lead) to life-sustaining bodies covering 70 percent of the planets surface. Life, Flannery shows, first appeared in these oceans in the form of microscopic plants and bacteria, and these metals served as catalysts for the earliest biological processes known to exist. From this starting point, Flannery tells the story of the evolution of our own species, exploring several early human species from the diminutive creatures (the famed hobbits) who lives in Africa around two million years ago, to Homo erectus before turning his attention to Homo sapiens, who first started leaving Africa some fifty thousand years ago. Drawing on Charles Darwins and Alfred Russel Wallaces theories of evolution and Lovelocks Gaia hypothesis, Tim Flannerys Here on Earth is a dazzling account of life on our planet. Also available: The Eternal Frontier Throwim Way Leg The Future Easters The...
